

Preseason Activities

01-26-2023 to 02-07-2023

Coaches, here is a list of the things you should be helping your students work on leading up to the **Kickoff** event on 02-08-2023.

1. Team Identity

- Team should come up with a name at a minimum - we will need this name at **Kickoff**
- It is *never* too early to get started on banners, posters, and signs
- Team logo - optional
- Team colors - optional
- See our *SRL Getting Started* page by scanning the QR code below or at quarkmine.com/srl-getting-started for more identity tips and ideas

2. Identify and Obtain Supplies

- Identity-related supplies
- Method to transport the robot and transmitter (bonus if it incorporates identity) - robots will need a minimum of approximately a 10"x10"x10" cube, and transmitters will need approximately 12"x12"x12"
- We have recommended supplies linked on the *SRL Getting Started* page which can be accessed by using the QR code below or at quarkmine.com/srl-getting-started. The batteries, M3 cap screw assortment, and multi-driver are the most essential.
- The first design and build will involve utilizing non-metal household items and/or recyclables to build passive robot systems and add identity to the robot. It will benefit your team to set aside some cardboard, milk jugs, packing foam, etc. for use in these activities.

3. Ethos

- It is a good idea to prepare students now for battling robots - it is the nature of this sport that robots will take damage, get knocked out of the ring, etc.
- SRL is about helping all teams to compete at their very best - it is normal to see coaches helping other teams, students helping other students, and everyone working together so we can leave it all on the competition floor
